### Chapter 10: Solving Exponential Equations

Solve for the unknown value.

1.  $2^{3x} = 4^{x-2}$

2.  $4^{2x-2} = 1/88$

3.  $5^{7x} = 1/625$       $= 0$

4.  $2^{3x} = 1/8$

5.  $4^{x-2} = 256$

6.  $5^{2x-2} = 625$

7.  $18^{3x} = 324^{x-7}$

8.  $25^{3x-2} = 1/64$

9.  $7^{2x} = 1/343$       $= 0$

10.  $2^{3x} = 1/128$

Circle #	Correct	0	1	2	3	4	5	6	7	8	9	10
Percentage Score		0%	10%	20%	30%	40%	50%	60%	70%	80%	90%	100%

#### Solve for x grade 9 worksheets.

It's a bit of an eyesore. However, on the Home screen and in other apps that have darker content, such as movies, the notch mostly fades in the background. The video player is a good example. In fact, the iPhone X and Pixel 2 tied in a multi-round camera shootout. The iPhone X offers more natural looking portraits, as I discovered when I took two photos of my colleague Mike with both Apple's handset and the Pixel 2. After registering my face using the TrueDepth camera on the front of the phone, which involved titling my head in different directions, the iPhone X typically unlocked the phone without an issue. To see the results of other smartphones, as well as our complete scoring methodology, check out our smartphone drop tests. What's it like not having a home button? The iPhone X's new interface feels like the future, but there's a learning curve. On the Tom's Guide Battery Test, which involves continuous web surfing over LTE (in this case T-Mobile), the iPhone X lasted 10 hours and 49 minutes. That's comparable to the iPhone 8 Plus (10:47) and iPhone 8 (10:17) and much better than the Note 8 (6:56). The Galaxy S8 took 4:07. On Geekbench 4, which measures overall performance, the iPhone X notched a very high score of 10,357. Fire up an augmented reality game or a movie, and you'll see that everything else falls away except the content. It's an exciting sensation, for sure, and after using the iPhone X even for over a week I'd hesitate to go back to my iPhone 7 Plus. When I watched the same Wonder Woman trailer on both phones, the greens on the Note 8's screen popped more. But then I looked closer, along with my colleague Adam Ismail, and we did some additional side-by-side tests with the Pixel 2 and Note 8, and the iPhone X's screen consistently delivered better image quality and viewing angles. That's slightly better than the Pixel 2 XL (0.26) and it beats the Note 8 (0.5). The iPhone X's screen also gets very bright at 574 nits, which beats the Pixel 2 XL's 438 nits and Note 8's 408 nits. Not only do I and the table look brighter, it's easier to make out the burning candle, which got blown out on the iPhone X's photo. How good is the performance? The iPhone X is the fastest phone ever, but so is the iPhone 8 and iPhone 8 Plus. The speakers are certainly powerful enough to be heard in a moving car. Is it worth \$1,000? As of right now, yup. You have the choice of watching videos in 16:9 widescreen mode or going full-screen, which I did for streaming Wonder Woman in iTunes. I'm also keen to see how developers leverage this camera for augmented reality apps. Mostly, I'm ready to leave bezels behind, even if it requires that I re-learn how to do things I've done with Home button since way back in 2007. The iPhone 8 Plus took the same amount of time, while the Pixel 2 took 2 minutes and 55 seconds and the Galaxy Note 8 needed 3:03. It gives the design more polish than the aluminum iPhone 8 and 8 Plus, as a telltale reminder that it's in a higher class. The back is made of glass, which enables wireless charging. The text on the signs in the background were also easier to make out on the iPhone X's pic. The iPhone X also one-ups the iPhone 8 and 8 Plus with its 7-megapixel TrueDepth camera, which allows you to take Portrait Mode photos using the front shooter. It adds a hair of a delay where there was none before. To close apps within this menu, you need to press and hold to make Delete buttons appear. However, the iPhone X feels denser and heavier than the Galaxy S8, which has the same size 5.8-inch display. I don't mind the heft necessarily, especially since the iPhone X is rimmed in a gorgeous and very strong stainless steel. Over the first day of use, I really had to reprogram my brain to swipe up to exit apps, as opposed to just pressing a button. Check out our roundup of the best Qi wireless chargers that work with the iPhone X and iPhone 8. How good is call and sound quality? For a fairly compact flagship, the iPhone X pumps out powerful stereo sound. Is Face ID a suitable replacement for Touch ID? Swiping down from the middle or left of the screen reveals your notifications. Using Apple Pay on the iPhone X is pretty easy, as all you need to do is double click the phone's side button and then use Face ID to authenticate. Is the notch a big deal? Well, it's definitely noticeable. The bokeh effect looks much more natural on the iPhone 8, while it appears more uneven with Google's camera. But the process isn't instant. You'll know for sure when the iPhone X is ready to use when a small padlock icon unlocks towards the top of the screen. The iPhone X's screen (2436 x 1125 pixels) is sharper than the iPhone 8 Plus (1920 x 1080). Not only did I have no problem stretching my thumb across the display, the iPhone X is also a lot easier to slip into my front jeans pocket than the iPhone 8 Plus. Because there's very little bezel on the iPhone X above and below the screen, the phone is significantly shorter and narrower than the iPhone 8 Plus; the iPhone X is also an ounce lighter than the iPhone 8 Plus. But if you swipe up on the screen almost as soon as you look at the phone, you can unlock the iPhone X almost instantly. Face ID worked when I had the iPhone X laying on my kitchen counter; I didn't need to pick the phone up to unlock it. The TrueDepth camera on the iPhone X is capable of capturing 50 facial muscle movements and mirroring them on one of several cute characters, from an alien and unicorn to a panda and (yes) poo. I did notice that the iPhone X heated up a little when using Animojis extensively, as the features leverage both the A11 bionic chip and front camera at the same time. And Apple has banished Touch ID from this model in favor of facial recognition. Using a stopwatch, I found Face ID slightly slower than Touch ID. The vertically oriented camera does protrude a bit, but it doesn't look awkward. For instance, I could easily make out the braid on Wonder Woman's hair, which got lost on the Note 8 and Pixel 2. It's worth noting that this 5.8-inch screen gives you less viewing area than the 5.5-inch iPhone 8 Plus, because the iPhone X's screen has a narrower aspect ratio. From there, you swipe up from the very bottom of the display to unlock the phone. On Fall Out Boy's "Tnks fr the Mxrs," the speakers did a fine job separating the crunching guitars, Patrick Stump's soaring vocals, and driving beat. But if you're an iOS fan and you've been waiting for a phone that delivers a great combination of features, performance and looks, the iPhone X should delight. Credit: Shaun Lucas/Tom's Guide That runtime is over an hour longer than the category average, and it also beats the iPhone 8's 9:54 and Galaxy S8's 10:39. On the other hand, the iPhone 8 Plus lasted an even longer 11:16, and the Pixel 2 XL (12:09), Galaxy Note 8 (11:11) and Galaxy S8+ (11:04) had better endurance. Can you fast charge the iPhone X? I didn't have any issues using Face ID in bright sunlight. How durable is the new design? We tested the iPhone X's toughness by dropping it on its face onto wood from a height of 4 feet and 6 feet; we then dropped it on its edge and face onto concrete from 4 feet; we then dropped it on its edge and face from 6 feet onto concrete. The iPhone X survived both 4- and 6-foot drops on its face onto a wood surface, and only picked up minor scratches from a 4-foot edge drop onto concrete. Philip said the echo disappeared once I turned off the speakerphone. Unlike other phones with edge-to-edge screens, the iPhone X has a notch toward the top of its display that swoops down. The iPhone X didn't become uncomfortably warm, though. Is this the best OLED screen? This is not going to sound scientific at all, but my first impression of the iPhone X's 5.8-inch OLED screen was that it wasn't OLED-y enough. What I mean by that is that the colors weren't as saturated as the hues from the Galaxy Note 8's screen, for example. That's not a knock against the newest iPhone; it simply has the same powerful A11 Bionic chip inside, which runs circles around Android phones in both synthetic benchmarks and real-world tests. For instance, the iPhone X took only 42 seconds to transcode a 2-minute 4K video using the Adobe Clips app. And, most important of all, is the iPhone X really worth \$999? I don't take a lot of selfies, so having Portrait Mode up front is just nice to have, but I know I'm going to have a lot of fun with Animoji (thanks to that same front TrueDepth camera). As a result, the iPhone X earned a fairly good toughness score of 6.2 out of 10. I needed to enter my passcode to activate Face ID, even though I hadn't deactivated it. I also had to remember to swipe up and then hold to see all my open apps, compared to just double tapping the Home button on earlier iPhones. The sound got a bit harsh close at max volume, though. To test the call quality, I phoned my colleague Philip Michaels over T-Mobile's network. On my current iPhone 7 Plus, I can just press and hold the Home button to unlock and start using the device. There's no more Home button. I'd prefer just being able to swipe up to force quit apps. He came through loud and clear on my end. Although choosing 16:9 creates a space to the left of the content so that the notch isn't an issue, I actually preferred full-screen mode despite the video wrapping around the notch, because it brought me closer to the action and felt more immersive. The notch does claim one casualty: the battery percentage you have left doesn't display by default. You'll have to invest in a USB-C power adapter (\$49) plus a USB-C to Lightning cable (\$25). This is a matter of personal taste, but assuming the Face ID feature continues to work as promised, I would gladly pay the extra \$6 to \$8 extra per month that the iPhone X commands over the iPhone 8 Plus when you buy it through a carrier. That's because I want a big-enough screen in a design I can easily use in one hand. Putting the iPhone X next to the iPhone 8 and iPhone 8 Plus, it's easy to see why this is the true Apple flagship. You get a fairly large 5.8-inch screen in a phone that's easy to use with one hand. We've updated our review of the iPhone X based on our in-depth smartphone drop tests. I noticed this immediately when taking photos with both phones side by side; the iPhone 8 Plus gave me a much bigger viewfinder to preview my shots. How good are the cameras? It's a subtle difference, but I appreciated the wider aperture on the iPhone X's telephoto lens versus the iPhone 8 Plus (f/2.4 vs f/2.8) in my first day of shooting. (A score of 0 is perfect.) With the True Tone on, that was improved to 0.21. Seriously. In addition, Mike's skin tone looks warmer on the iPhone X, which I prefer. However, the Pixel 2 produced better image quality in low light. The sweet spot is 10 to 20 inches away from your face. Because you need to swipe up on the screen to unlock the iPhone X, there's technically an extra step compared to Touch ID. But the effect looks a little too airbrushed? To compare image quality versus the Google Pixel 2, our favorite Android camera phone, we took several shots around New York City, and they were fairly evenly matched. The Galaxy S8 (6,295) and Pixel 2 (6,282) were further behind. How long is the battery life? The iPhone X's endurance is pretty impressive, but it's not quite as long lasting as the iPhone 8 Plus. Take this shot of me in a dimly lit restaurant. But that's not the whole story. Apple strived to achieve the most realistic colors possible, and that's borne out by the iPhone X's Delta-E reading of 0.27. But you need to make sure you're looking at the phone. But now that I've actually had a chance to play with Animoji, I can easily see this being a runaway hit. Is the new iPhone playing catch-up to the Android competition or is it a true step forward? He said I sounded clear but a bit echo-y with using the speakerphone. Unfortunately, Apple continues to not offer a headphone jack, even though the Galaxy S8 and Note 8 have one and offer water resistance. One thing I do like is the enlarged Power button on the right side, which makes it easier to find and activate by feel. MORE: iPhone X vs. The good news is that iOS 11 and the A11 Bionic chip are plenty powerful enough to handle gobs of apps in the background. You don't swipe up to activate Control Center on the iPhone X as you would on any other phone running iOS 11; instead, you swipe down from the top-right corner to see your shortcuts for Wi-Fi, Bluetooth, screen brightness and more. Pixel 2 XL: Apple's Phone Is a Notch Above Face ID good enough to replace Touch ID? Based on my time with the iPhone X, Face ID is dependable and becomes second nature after a week of use. Lastly, a 4-foot drop into a toilet caused no further damage. While the screen was cracked, it was still usable. There are cheaper USB C power bricks though that perform almost as well as Apple's, as we found in our testing, but it's still annoying that you don't get fast wired charging out of the box. If you'd rather go the wireless route, the iPhone X does support Qi wireless charging, and there are a couple of chargers that support fast wireless charging. Apple clearly added this extra step so that you wouldn't accidentally force quit an app. I also wish I could swipe up anywhere on the screen; instead, Apple forces you to do it from the bottom of the display. I had no problem unlocking the iPhone X with my face in a very dim bar and even at night in bed in total darkness, but for some reason, Face ID got tripped up on an elevator. It interrupts the flow, especially in apps that have a white background like Messages and Email. And I like having a more capable telephoto lens with the iPhone X's dual rear cameras. In addition, you can apply Portrait Lighting effects to these images, just as you can with the dual rear cameras. The iPhone X did a nice job of blurring out the background in a selfie I took, and then added a Contour filter, which made my face look tanner and thinner (and I'm okay with that). What's so striking about the iPhone X isn't what Apple added to its tenth-anniversary smartphone, but what it leaves behind. There are almost no bezels around the screen. In one shot of Times Square taken with 2x optical zoom turned on, I could make out more detail in the spotlights beneath a billboard on the iPhone X; on the iPhone 8 Plus, those lights looked fuzzier. You have to swipe down from the top right to see it. Are Animoji cool or gimmicky? I rolled my eyes over this feature when Apple announced the iPhone X. In case you had any doubt, this reinvention of Apple's iconic handset is still one of the best smartphones around, though also brings with it a lot of questions. I especially noticed the brightness difference at wider viewing angles when we put the phones side by side. There's more good news. And there's TrueTone for automatically adjusting the white balance of the screen based on ambient lighting, which can make reading easier on the eyes. The Pixel 2 XL hit 130 percent. A 4-foot face drop onto concrete caused the screen to crack, as did a face drop from 6 feet. See the results below. Is the iPhone X's design that much better? In short, yes. And what about wireless charging? The iPhone X is capable of getting to 50 percent charge in just 30 minutes, but you need to pay extra to do it. Apple also includes HDR support for delivering more colors and better contrast in movies — including flicks in iTunes. In addition, on closer inspection the iPhone X's Super Retina panel offered more contrast between the sky and water. On our lab tests, iPhone X's display reproduced 128.6 percent of the color gamut, compared to 204.8 percent for the Note 8. The iPhone 8 and iPhone 8 Plus just look antiquated next to this device. Compared to the Android competition, the Galaxy S8 and Galaxy Note 8 offer more colorful screens in even sexier curved designs, and the Pixel 2 and Pixel 2 XL pack superb cameras that outgun the iPhone X in low light.

It was very helpful. It was a great tool to check my answers with. I would recommend this software to anyone no matter what level they are at in math.
